Environmental Policy

The management and employees of BuR Lighting are aware that all activities connected with the development, sale and application of our LED luminaires and LED components have a decisive influence on the environment.

We voluntarily accept the challenge of comprehensive environmental protection. We include all employees, suppliers and service providers of our company in this responsibility.

Environmental protection is one of the most important tasks of the company. We therefore feel obliged to achieve the economic goals while observing the requirements of environmental protection.

In accordance with our tasks, our customers also demand a minimum failure rate and maximum reliability for our products, processes and services.

We are convinced that, as a basic prerequisite for this, not only environmentally friendly action, but also order and cleanliness, precise and timely action and expert advice are essential key positions for environmental protection.

Environmental Policy - Guidelines

- We commit ourselves to comply with environmental laws and the environmental goals we have set ourselves.
- We commit ourselves to the continuous reduction of environmental pollution with regard to energy, raw materials, auxiliary and operating materials and waste materials.
- We continuously evaluate the handling of energy, raw materials, auxiliary and operating materials, components and waste.

- All employees are fully committed to environmental protection.
- All employees are trained on environmental topics and participate in all measures for the continuous improvement of all processes (CIP) and products.

- With our LED product selection and program composition we strive for the optimal available state of the art.
- We involve our suppliers in this responsibility and continuously check compliance with the BuR Lighting product and supply standards.
- We regularly check and assess our supply chain and our products with regard to their environmental impact.

- We maintain an open and cooperative exchange of experience and information with customers, suppliers, authorities and the public.
